

Wifj N-motion Internet

Being full-time motorhomers, our cell phone and email is the main way we have to stay connected to family, as well as conducting all of our daily business while moving down the road. We have tried the little antennas that you put directly on your cell phones and found them to be a joke. We were determined that there was an answer out there for our needs and after much research and testing, we found it. **It even allows both phone and Internet to be used while traveling down the road.**

We found Wilson cellular amplification equipment was the best to reach out and boost the cellular tower signal, Verizon Wireless service was best to give us phone and high-speed Internet coverage and Cradlepoint was the best Wi-Fi router to redistribute the Internet service in and around our RV using secure Wi-Fi.

The **N-motion RV Full System Kit** uses the Wilson amplifier to boost the normal signal of 1/2 watt power to the maximum legal limit of 3 watts, **extending the service range from approximately 15 miles to 40 miles.*** The kit also uses the new EVDO Verizon high-speed cellular Internet service for its Internet connection and Wi-Fi to connect multiple wireless laptops to browse the Internet or read email simultaneously. This system also boosts your cell phone range at the same time you're on the Internet. Our kits work with most cell phone providers so you don't have to have Verizon as your cellular company.

Like any add-ons to your RV, home or automobile, a quality installation is the most important ingredient for dependability and ease of use. Here at **Custom Coach Connection** we have over 50 years of electronic and communication experience and over five years of full-timer RV experience, so when we sell and install a system for you, we feel comfortable we have provided you with a system that is good quality, dependable and easy to use, at a good value.

The **N-motion Auto Add-On Kit** system can be installed easily in your tow vehicle. An additional magnetic car antenna with no holes to drill makes it a simple installation. It uses 12 volts power so you can enjoy high-speed Internet and great cell phone coverage from your car with no problems. Installation in the home is as simple as taking the wireless router and modem inside with you when you get home. It plugs it a regular household outlet and is ready to use as soon as it has power.

You now are free to roam about the country with extended cell phone and Internet coverage. Our installations are done with the utmost care and will not hurt your RV, auto, cell phone or computer in any way and are completely FCC compliant.
